

Holder Hardware Auto Electrical Circuit Board

Holder Hardware Auto Electrical Circuit Board in stock made in China are from Hanlinrui factory. We provide customized service, quotation with cheap price.

Product Description

Our factory specializes in CNC center and precision lathe machining. We are one of the professional China Holder Hardware Auto Electrical Circuit Board manufacturers and suppliers.

Our CNC machining capabilities

Qingdao Hanlinrui Machinery Co., Ltd.
Phone: +86-15275240027
E-mail: sales@hlrmachining.com

We operate almost every kind of CNC mill and turning center, and pride ourselves on being able to machine whatever you need, from simple, 'as-machined' workholdings to complex, organic geometries with tight tolerances. On request, we can also produce parts with EDM and grinders. Build envelopes, minimum feature sizes and design guidelines vary for milling and turning. Click through to see our full capabilities.

Maximum capabilities for CNC turning

Part size limitations	Metric units	Imperial units
Maximum part diameter	431mm	17in
Maximum part length	990mm	39in
Maximum swing over the carriage	350mm	13.7in
Maximum speed:1700PRM		
Motor power:640W		

How much does CNC machining cost?

Prices start around \$65, but vary based on complexity, quantity and lead time. The best way to find out is to submit a 3D CAD model and get an interactive quote with design for manufacturability (DFM) feedback. Because we use proprietary software and automated fixturing processes, there are no up front non-recurring engineering (NRE) costs. This makes purchasing quantities as low as 1 to 200 parts cost effective. Prices compared to 3D printing are comparable to somewhat higher, but machining offers improved material properties and surfaces.

What is CNC milling?

CNC milling is a machining process that utilizes computerized controls to manage the movement and operation of multi-point rotary cutting tools. As the tools rotate and move across the surface of the workpiece, they slowly remove excess material to achieve the desired shape and size.

What is a CNC turning?

CNC Turning is a manufacturing process in which bars of material are held in a chuck and rotated while a tool is fed to the piece to remove material to create the desired shape.

Holder Hardware Auto Electrical Circuit Board

Hanlinrui Machinery is a professional Holder Hardware Auto Electrical Circuit Board manufactures and Suppliers from China factory. We look forward to cooperating with you, if you want to know more, consult us now!
